	<b>Index</b>	<b>21</b>

A project scaffold generator that moves beyond mere templates.

- Free software: BSD license
- Documentation: <https://cookiepress.readthedocs.io>.

## 1.1 Features

- None yet. Very early project.

## 1.2 Credits

This package was created with [Cookiecutter](#) and the [elgertam/cookiecutter-pipenv](#) project template, based on [audreyr/cookiecutter-pypackage](#).

### 2.1 Stable release

To install CookiePress, run this command in your terminal:

```
$ pip install cookiepress
```

This is the preferred method to install CookiePress, as it will always install the most recent stable release.

If you don't have [pip](#) installed, this [Python installation guide](#) can guide you through the process.

### 2.2 From sources

The sources for CookiePress can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/elgertam/cookiepress
```

Or download the [tarball](#):

```
$ curl -OL https://github.com/elgertam/cookiepress/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

## CHAPTER 3

---

### Usage

---

To use CookiePress in a project:

```
import cookiepress
```

## 4.1 cookiepress package

### 4.1.1 Submodules

### 4.1.2 cookiepress.cli module

### 4.1.3 cookiepress.cookiepress module

Main module.

### 4.1.4 Module contents

Top-level package for CookiePress.

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

## 5.1 Types of Contributions

### 5.1.1 Report Bugs

Report bugs at <https://github.com/elgertam/cookiepress/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 5.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

### 5.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

### 5.1.4 Write Documentation

CookiePress could always use more documentation, whether as part of the official CookiePress docs, in docstrings, or even on the web in blog posts, articles, and such.

### 5.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/elgertam/cookiepress/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 5.2 Get Started!

Ready to contribute? Here's how to set up *cookiepress* for local development.

1. Fork the *cookiepress* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/cookiepress.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv cookiepress
$ cd cookiepress/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 cookiepress tests
$ python setup.py test or py.test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 5.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 3.5, 3.6, and 3.7. Check [https://travis-ci.org/elgertam/cookiepress/pull\\_requests](https://travis-ci.org/elgertam/cookiepress/pull_requests) and make sure that the tests pass for all supported Python versions.

## 5.4 Tips

To run a subset of tests:

```
$ py.test tests.test_cookiepress
```

## 5.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bumpversion patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.

### 6.1 Development Lead

- Andrew M. Elgert <[andrew.elgert@gmail.com](mailto:andrew.elgert@gmail.com)>

### 6.2 Contributors

None yet. Why not be the first?

### 7.1 0.1.0 (2019-05-17)

- First release on PyPI.

### 7.2 0.1.1 (2019-05-17)

- Cleaned up some project settings.

### 7.3 0.1.2-0.1.4 (2019-05-17)

- Project settings cleaned.

### 7.4 0.1.5 (2019-06-26)

- Added donation link

## CHAPTER 8

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
